

Etsy Integration

Install and configuration guide. Syncs your Magento catalogue to Etsy using the API v3, with a background queue so product saves in admin stay instant.

PACKAGE	MODULE	REQUIRES	LICENSE
blueprint3d/module-etsy-integration	BluePrint3D_EtsyIntegration	Magento 2.4.x PHP 8.1-8.3	Commercial EULA

1 What it does

Most Etsy connectors make slow, synchronous API calls during product save, which can lock up the admin edit page. This module instead queues each change into a database table (blueprint3d_etsy_queue) and syncs it in the background via cron, so saving a product in admin stays instant.

Built for Etsy API v3, it converts both native Magento Custom Options and BluePrint3D Shared Product Options into Etsy Personalizations and dropdowns automatically.

FREE TIER This edition syncs up to 20 products. See Etsy Integration Pro for unlimited products, bulk actions, and price markup rules.

2 Installation

1 Install via Composer

```
$ composer require blueprint3d/module-etsy-integration
```

2 Enable the module

```
$ php bin/magento module:enable BluePrint3D_EtsyIntegration
```

3 Run setup upgrade

```
$ php bin/magento setup:upgrade
```

4 Compile and flush cache

```
$ php bin/magento setup:di:compile
$ php bin/magento cache:flush
```

3 Configuration

All settings live in one place:

Stores > Configuration > BluePrint3D > **Etsy Integration**

GROUP	FIELD	PURPOSE
API Credentials	App Key, Shared Secret	Your Etsy OAuth keystring and secret, plus a Connect to Etsy button to complete authorization.
Global Listing Defaults	Who made it / What is it / When made	Default answers applied to every listing pushed to Etsy.
Data Synchronization	Category Taxonomy	Downloads and caches the latest Etsy category tree for mapping.
Product Sync Settings	Sync Mode	Real-time syncs instantly on save; Cron queues and syncs in the background.
Product Sync Settings	Unsupported Options Handling	Strict aborts the sync and logs an error; Lenient strips unsupported options and logs a warning.

4 First sync

1 Connect your Etsy shop

Enter your App Key and Shared Secret, then complete OAuth authorization.

2 Sync the category taxonomy

Downloads Etsy's categories so you can map your own against them.

3 Map categories

Under Catalog > Categories, assign an Etsy Taxonomy ID to each category you plan to list.

4 Choose your sync mode and options handling

Pick real-time or cron, and strict or lenient handling for unsupported options.

5 Save a product to queue it

Saving any mapped product queues it for sync - immediately in real-time mode, or on the next cron run otherwise.
